NARRATIVE
This survey was performed at the request of Tennessee Valley Authority to locate the corners and map two possible G.P.S. tower sites. The General Land Office corners indicated on the plat were found and used to control the survey. The latitudes and longitudes were determined by using a Trimble Pro XRS receiver with an Omnistar Satellite link. The values yielded by this system are sub-meter positions. The survey was performed using a combination of G.P.S. equipment and procedures and conventional survey techniques.
